

YUNUS ABBAS

YUNUS ABBAS

Frontend Engineer

Oyo State, Nigeria | github.com/springboot20 | [linkedin.com/in/abbas-yunus-70b65533a](https://www.linkedin.com/in/abbas-yunus-70b65533a) | <https://codesuite-portfolio.vercel.app>

PROFESSIONAL SUMMARY

Frontend Engineer specializing in React, Next.js, TypeScript, and modern web application architecture. Experienced in designing scalable component systems, building complex user interfaces, implementing real-time experiences, and delivering performant, responsive applications across real estate, construction safety, and communication platforms. Strong track record of solving complex frontend challenges, improving application reliability, optimizing user experience, and collaborating with cross-functional teams to ship production-ready features.

TECHNICAL SKILLS

Frontend: React, Next.js (App Router), TypeScript, JavaScript ES2022+, Tailwind CSS, Framer Motion, Headless UI

Backend: Node.js, Express.js, FastAPI, REST APIs, JWT Authentication, OAuth 2.0, WebSocket (Socket.IO)

State Management: Redux Toolkit, RTK Query, Formik, Yup

Databases & Storage: PostgreSQL, SQLite, SQLAlchemy, IndexedDB

Cloud & Integrations: Cloudinary, Mailgun, Google Maps API, Google OAuth

Development Tools: Git, GitHub, Docker, Figma

PROJECTS

Dreamlink — Real Estate Platform · Alkaios · Team Contributor

2025 – Present

Next.js · Redux Toolkit · WebSocket · TypeScript · Tailwind CSS

- ▶ Developed and maintained scalable React/Next.js interfaces supporting real-time messaging, notifications, onboarding workflows, and booking experiences across a production real estate platform.
- ▶ Architected reusable frontend components and custom hooks to standardize WebSocket integrations across messaging and notification systems, reducing implementation complexity by 40%.
- ▶ Built a multi-step onboarding system using Formik and Yup with dynamic media handling and validation, ensuring seamless document submission workflows and zero user data loss during navigation.
- ▶ Optimized Redux Toolkit and RTK Query state management by resolving synchronization issues and reducing unnecessary re-renders by approximately 30%.

- ▶ Implemented responsive booking interfaces with real-time slot availability awareness, eliminating double-booking scenarios while improving scheduling usability.
- ▶ Delivered secure Google OAuth 2.0 and 2FA authentication workflows, improving login reliability and user account security.
- ▶ Built reusable React components, custom hooks, and scalable state management patterns that improved maintainability and accelerated frontend feature delivery.

DfOSH-CMI — Construction Safety Assessment Tool ·

Alkaaios · Lead Frontend

2026 – Present

Next.js App Router · TypeScript · Tailwind v4 · Framer Motion · IndexedDB

- ▶ Led end-to-end frontend development of a construction safety assessment platform from architecture to production deployment.
- ▶ Resolved complex PDF rendering and validation issues, improving reliability of exported client reports.
- ▶ Engineered custom SVG-powered analytics visualizations without external charting libraries, improving bundle efficiency while maintaining interactive reporting.
- ▶ Designed an offline-first architecture using IndexedDB, enabling uninterrupted audit completion across sessions with zero recorded data loss.
- ▶ Internationalized the platform using next-intl to support multilingual assessment reports.
- ▶ Established reusable UI patterns and component structures that ensured consistency across assessment workflows and reporting interfaces.

Real-Time Chat Application · Personal / Open-Source

2023 – 2025

React · Redux Toolkit · RTK Query · Socket.io · Node.js/Express

- ▶ Built a full-stack real-time messaging platform featuring file uploads, optimistic UI rendering, voice messaging, and persistent chat history, delivering functionality comparable to modern commercial messaging products.
- ▶ Migrated message persistence from volatile client state to IndexedDB storage, improving user experience through durable cross-session chat history without backend database modifications.
- ▶ Diagnosed and resolved critical authentication, file upload, and email verification defects, improving platform stability and ensuring reliable user onboarding workflows.

Personal Portfolio Website · Personal

2023

React · Next.js · Tailwind CSS · Mailgun · Google Maps API

- ▶ Designed and shipped a fully responsive portfolio with Next.js, integrating a Mailgun-powered contact form via a custom API route and Google Maps AdvancedMarkerElement for location-aware UI.

EARLIER DEVELOPMENT WORK

Python CLI Projects: Independently built and iterated on 4 CLI tools (Number Guessing Game, Todo CLI, Budget Tracker, Hangman Game), applying input validation, user feedback loops, and clean code principles. Demonstrated the ability to scope, build, and self-review software outside a team context.

EDUCATION

2021 - 2025/2026

Ladoke Akintola University of Technology (LAUTECH)

Bachelor of Technology (B.Tech.), Computer Engineering

Ogbomoso, Oyo State, Nigeria

FRONTEND SPECIALIZATION

- React & Next.js Architecture
- State Management (Redux Toolkit, RTK Query)
- Performance Optimization
- Component Design Systems
- Real-Time Applications
- Authentication & Security
- Responsive UI Development
- Data Visualization
- Offline-First Experiences
